

# Extreme Events for Energy Providers

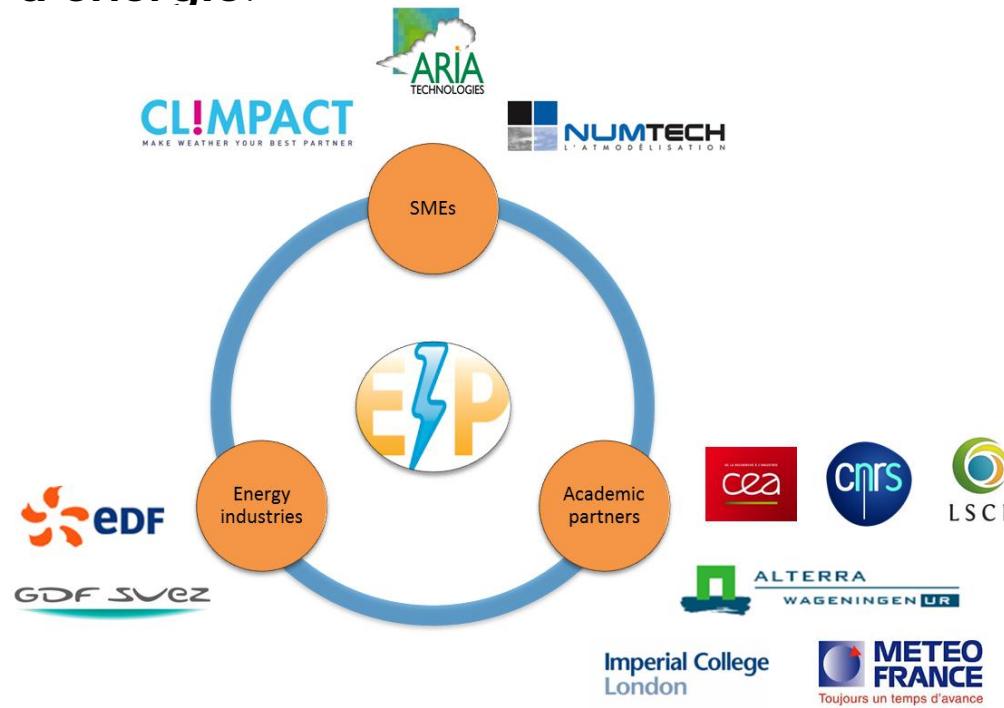

E3P aims at filling a gap between climate science and its practical use in the energy sector, and creating in turn favorable conditions for new business opportunities.

Fanny VELAY-LASRY , Céline DEANDREIS

# Objectif

- E3P rassemble scientifiques, PME et industriels autour d'une même table
- L'étude: **les extrêmes climatiques** (vagues de chaleur, de froid, sécheresse, tempêtes) qui provoquent des pics de demande et affectent **la production d'énergie**.

# L'étude de marché

ARIA  
Technologies

CLIMPACT

NUMTECH

## Questionnaire:

- sent to Energy, insurance, re-insurance, water, construction sectors
- ~54 industries/groups listed over 10 countries

**Consortium**  
E3P is a project of the Knowledge and Innovation Community (KIC-Climate). The academic partners are international leaders in climate science and studies on climate extremes. In its starting configuration, the consortium is composed of:

- Academic partners: LSCE (IPSL, CEA-CNRS-USQ, France), Imperial College (London, UK), Météo-France, Wageningen University (NL)
- Industrial partners: EDF, GDF SUEZ
- SMEs: ARIA Technologies, CLIMPACT and Numtech.

**Deliverables**

- The project will develop computer products (software, maps, data) in a generic format.
- Professional and student training on climate extremes and their impacts will be proposed.

Those deliverables are the cornerstones of climate services, and will be focused on extreme climate events.

**Contact**  
Dr. Pascal Yiou  
Project Coordinator

**E3P**

Bridging climate science and the energy sector to better anticipate future risks while fostering business opportunities

Extreme Events for Energy Providers

**E3P**

# L'étude de marché

- **Résultats:**

- **Wind speed** for distribution sector, **Sea level** increase for nuclear power plant, **flood**
- The energy providers don't seem to be **not very interested in future climate**.
- But they are **interested in seasonal forecast**.

Climate is not a big issue as long as the operators are covered by the insurances and they respect the quotas fixed by the State (ex: percentage of days of privation of electricity supply)

- **Réorienter le projet:**

- Sensibiliser le public et les fournisseurs d'énergie
- Réaliser des prévisions à moyen terme

# Les produits

- **Les indices** préconisés par les grands groupes industriels pour caractériser les vagues de froid
- **Chaîne de traitement des bases de données ENSEMBLES, CORDEX, DRIAS, CMIP5** pour calculer les indices

Temperature (tas):

Number of days with temperature below -11 C  
 Number of days with temperature below 0 C  
 Number of days with temperature beyond 22.5 C  
 Number of days with temperature beyond 30 C  
 Number of days with temperature beyond 35 C  
 Seasonal Mean (JJM, AMJ, JAS, OND)

Monthly Mean  
 Wintear Mean (NDJFM)

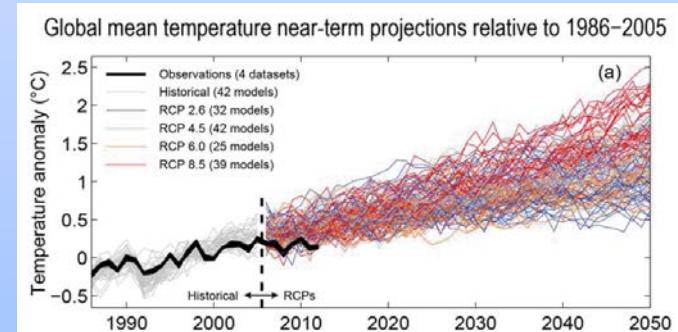

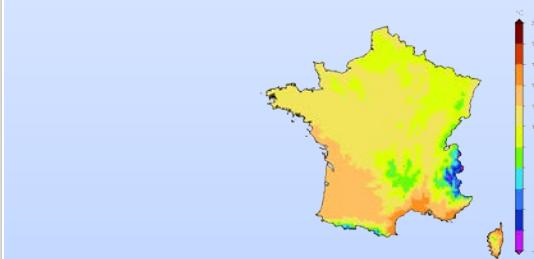

X% quantile of the winter mean temperature  
 (NDJFM)

Daily Minimum Temperature (tasmin):

Number of days with tasmin below 0 C

Daily Maximum Temperature (tasmax):

Number of days with tasmax beyond 40 C

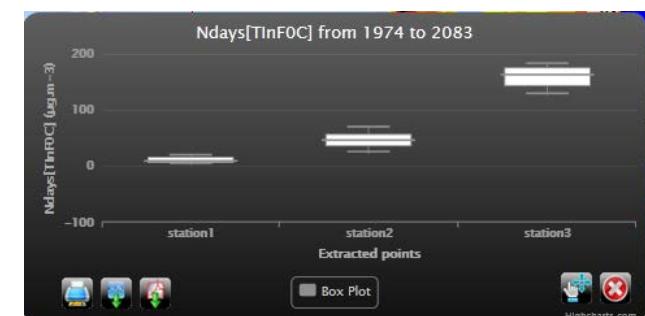

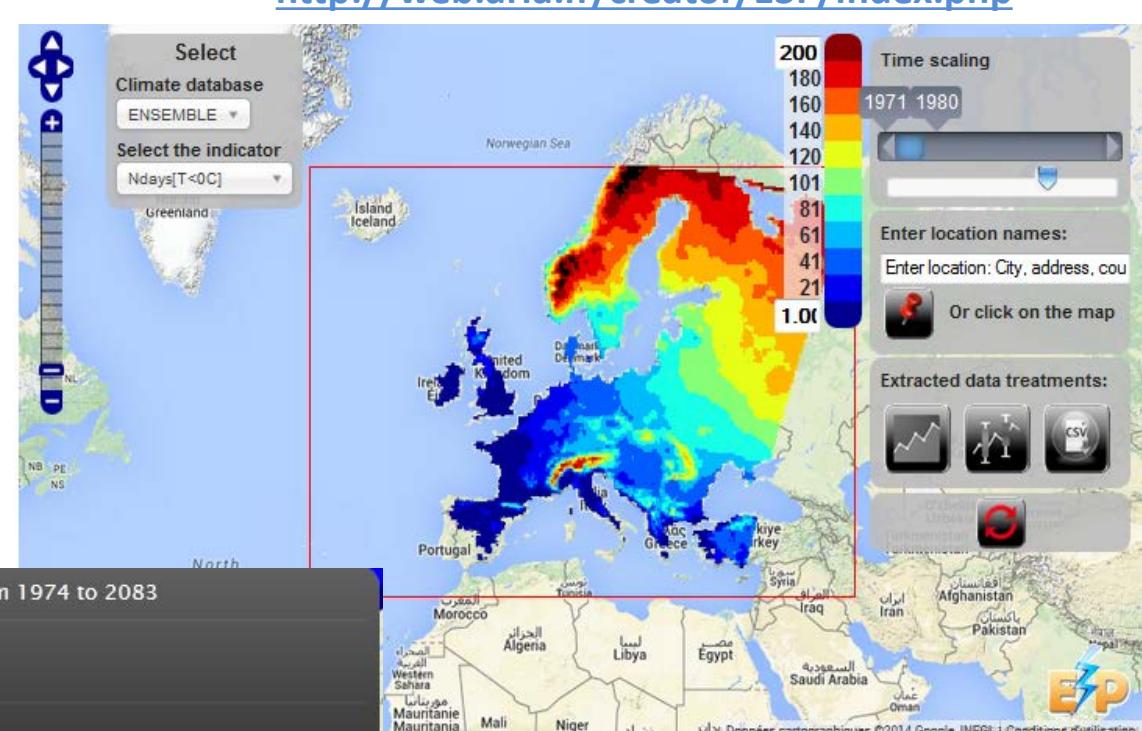

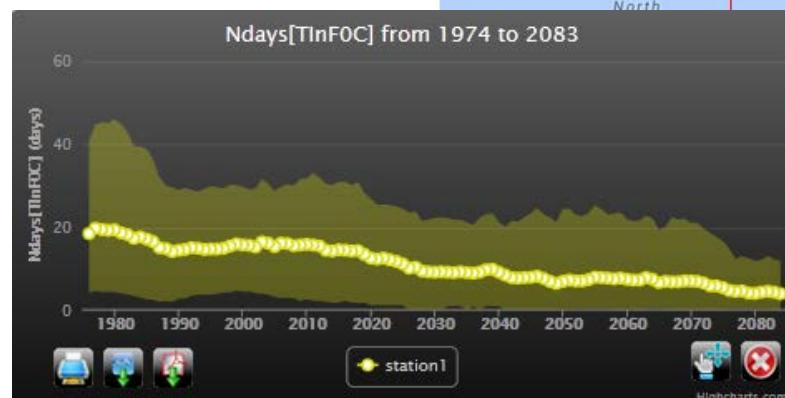

# Les produits

**E3Pviz tool: an attractive way to provide interesting information on the future climate**

- ENSEMBLES database and EURO-CORDEX (coming soon)
- Temperature, Wind and Precipitation indicators
- Maps, Time series, box plot...
- Free subscription to the website for an access to the expert version

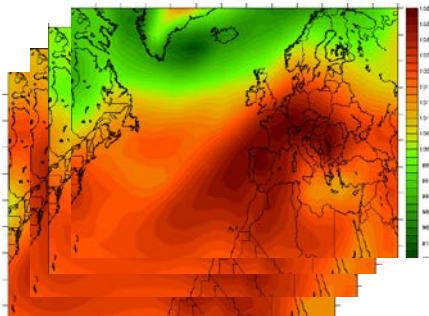

# Les produits

AnaWEGE (Yiou 2015)

## 20-years learning database

### Daily sea Level Pressure

### Daily climate variables

- variables: Tmin, Tmax, Tmean, wind, precip
- univariate or multi-variate
- Single station, multi-station or gridded data

d<sub>1</sub> d<sub>2</sub> d<sub>3</sub>...

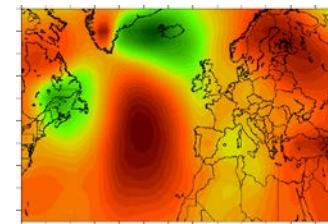

a<sub>1</sub> a<sub>2</sub> a<sub>3</sub>...

New sequence of data to be simulated

d<sub>1</sub> d<sub>2</sub> d<sub>3</sub>

a<sub>1</sub> a<sub>2</sub> a<sub>2</sub>+1 a<sub>3</sub>

Circulation map of  
d<sub>1</sub>, d<sub>2</sub>, d<sub>3</sub>...

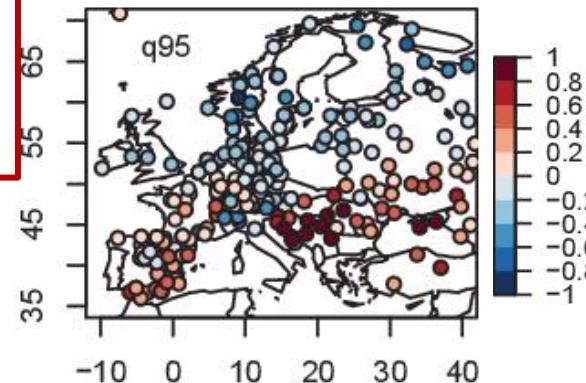

Circulation map  
of d<sub>2</sub>, a<sub>2</sub>+1...

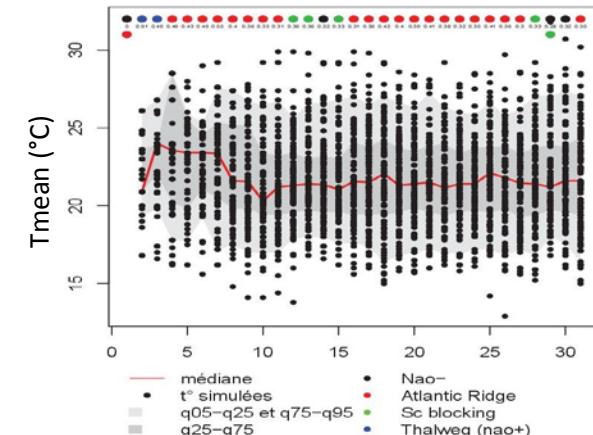

Analog selection from the  
database + association of  
climate variable(s)

### Simulation of 500 summers

Error on q95 Tmean anomalies (°C)

### Forecast – days since 2015/6/26
